introduction

RegaLead's range of fused tiles was first introduced in 2002 to give customers a simple, cost effective method of creating contemporary decorative designs without the need for expensive fusing equipment. For this latest catalogue, we have expanded the range further and included a range from Italian fusion specialists Vetro Suit. We believe we now offer the widest and most comprehensive range of fused glass tiles available in the marketplace.

Fused glass has been around since the middle ages but has really only entered the market for use in decorative glass panels in doors, windows and cabinets in the last 10 years. The long and technical manufacturing process involved in making large pieces of fused art glass made the products expensive and never really available to the mass market. With our range of fused tiles however we can now offer a luxury product, manufactured using the same traditional techniques, for a fraction of the cost normally associated with fused glass.

Fused glass is manufactured by slowly heating two or more pieces of glass in a kiln until they start to melt, and then gradually cooling the molten glass in a controlled way so that the pieces anneal and are fused together. To successfully fuse glass, it is essential that glasses which expand at the same rate when heated are used, otherwise long term the glass can break apart. For this reason we only use fully tested Spectrum™ Glass from the USA in our Fusion and Fusion Lite ranges and Murano glass in the Vetro ranges.

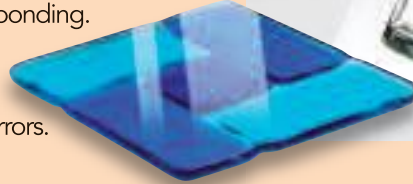

We offer 3 distinct ranges of fused tiles to give our customers the widest range of styles and possible applications...

Manufactured using a range of Spectrum™ Glass, these tiles are very consistent in colour and size and are typically 6mm thick at the edges. All the Fusion range comes with polished backs to ensure a perfectly flat surface for UV bonding.

As well as being used extensively in the window and door market, they are ideal for use as feature pieces on shower screens or mirrors.

We offer over 80 designs in 5 colour ways to create a range of tiles that complement each other in the finished work. Our recent additions to this popular range have been a selection of clear tiles made from textured glasses that give a stunning 3 dimensional effect.

clear glass**

With this range of luxury fused tiles we bring designers a touch of Italian design style and a wider range of shapes than with our Fusion™ ranges. Vetro tiles are manufactured in Italy

using Murano glass which has for centuries been used by the glass craftsmen of Venice to create stunning fused glass works. In addition to the transparent Murano glass many of the vetro tiles incorporate pieces of Millefiori meaning 'thousand flowers', which is a decorative glass technique unique to the island of Murano.

Fusion Lite is our latest range and, like the standard Fusion, is all manufactured using high quality Spectrum Glass™. The 48 tiles are available as diamonds and squares in four transparent colour ways as well as the new opaque neutral colours. With the 2-3mm edges on these tiles a whole range of new applications are available to glass designers:

Overlay lead - the thinner edges give the tiles a sharper shape definition than the standard Fusion tiles so they are ideal for applying adhesive lead around. Designers can now incorporate Fusion Lite™ into overlay panel designs in the same way as glass bevels.

UV Bonding - as with standard Fusion, the Fusion Lite pieces have smooth polished backs so are suitable for UV bonding.

Traditional Lead Cames - the thinner edges also allow the product to be used in traditional lead or zinc cames with a standard 3mm channel. Designers can now effectively combine traditional techniques and contemporary fused glass pieces to create modern leaded light designs

Aluminium Grille Systems - as the products are dimensionally accurate to within 1mm and have 2-3mm edges they are ideal for inserting into the increasingly popular decorative grille systems that are available in the market. The angles on the diamonds are 55° and 125° to suit the most popular systems.
